

RoHS

- RoHS - short for Restriction of the Use of Certain Hazardous Substances - is one of the most important EU directives, which regulates the usage of chemical substances in products sold in Europe.
- All electronic and electrical equipment sold in the European Union has to comply with the RoHS-Directive.

The RoHS Directive

In response to the EU Restriction of the Use of Certain Hazardous Substances in Electrical and Electronic Equipment (or RoHS Directive), marketing of all electrical and electronic equipment, which contains certain hazardous substances such as lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB), and polybrominated diphenyl ether (PBDE), is prohibited in EU Member States.

The threshold level for these specific materials in homogeneous material are:

- > Cadmium less than 100 parts per million (ppm)
- > Lead, Mercury, Hexavalent Chromium, PBB and PBDE less than 1000 ppm

The Toshiba Tec Group has developed processes and controls to further ensure none of the specified hazardous substances are contained in products. In terms of components and raw materials, the Toshiba Tec Group defines voluntary standards and performs inspections at production sites, while obtaining pledge forms from its suppliers to ensure that any delivered sub-assemblies and components are also compliant.

Toshiba Compliance

Our products bear the CE mark and we issue an EU Declaration of Conformity for each of our products. By this we declare that we have verified and ensured that all our products comply

with the relevant legal requirements (e.g. health and safety, environment) - such as RoHS, which is part of the EU Declaration of Conformity Scheme.

Compliance with voluntary and mandatory requirements underlines our position as a forward-looking and responsible company.
